

# Community Water Quality Monitoring Procedure

---

*Review copy: deleted wording is red/struck; inserted wording is blue/underlined.*

## P1 No Change

Community Water Quality Monitoring Procedure

**Reason:** Title is clear and grammatically correct.

## P2 Grammar

Purpose: This procedure ~~explain~~ explains how field teams ~~collects~~ collect and ~~records~~ record drinking water samples so that results ~~is~~ are reliable and ~~can be traced back~~ traceable to the correct site.

**Reason:** Corrected subject-verb agreement ('explain' to 'explains', 'collects' to 'collect', 'is' to 'are') and improved clarity.

## P3 Grammar

Scope: It ~~apply~~ applies to routine samples collected from reservoirs, treatment ~~outlets~~ outlets, and public taps. The procedure does not cover emergency chemical spills or laboratory instrument calibration.

**Reason:** Corrected verb agreement ('apply' to 'applies') and added serial comma for clarity.

## P4 Consistency

Responsibilities: The team leader ~~check~~ checks that each technician has ~~PPE~~, PBT, clean sample ~~bottles~~ bottles, and a calibrated meter. Technicians ~~is~~ are responsible for completing the Chain of Custody Form QMS-07 and reporting unsafe conditions.

**Reason:** Fixed verb agreement ('check' to 'checks', 'is' to 'are') and updated personal protective equipment to preferred abbreviation PBT.

## P5 Clarity

Procedure: Before collecting a sample, allow the tap to run for 2 minutes. Rinse the probe with clean ~~water~~ water, but do not rinse a sterile microbiological bottle. Record pH and turbidity in NTU at the site. Samples must be placed in a cooler between 2 and 8 degrees Celsius.

**Reason:** Improved punctuation and readability while preserving all operational parameters.

## P6 Grammar

Data recording: Write the site code, date, ~~time~~ time, and sampler initials on both the bottle and QMS-07. Corrections must be made with ~~one~~ a single line through the error; correction fluid ~~are~~ is not allowed. The reason for any missing reading must be stated.

**Reason:** Corrected grammatical error ('are not allowed' to 'is not allowed') and improved phrasing ('one line' to 'a single line').

## **P7 Technical Tone**

Escalation: If pH is below 6.5 or above 9.5, or turbidity is higher than 1 NTU, phone the team leader immediately. Do not tell the community that the water is safe or unsafe until the authorised official has reviewed the result.

**Reason:** Maintained precise thresholds and clear operational instruction.
